

Health Monitoring Report

RIKEN BioResource Research Center

RIKEN BioResource Research Center adopts the sentinel mouse program, which is specialized for the microisolator cage system. A sentinel mouse cage containing four mice is laid on a microisolator cage rack and small parts of dirty beddings from all cages of the rack are collected into the sentinel mouse cage every two weeks. One mouse from a sentinel cage is subjected to the examination at regular intervals.

Our items to be examined are classified into four classes shown in the table below. All sentinel mice are tested under the class A and B. Sentinel mice kept in the room for immunodeficient mice are screened on the class C as well. The class D contains a weak pathogen (MNV) or the certain pathogens that are believed not to exist in the Japanese laboratory mouse colonies hence mice are submitted to class D examination by request at recipient's charge.

Top row of health report indicates the index code of the sentinel animals tested. First two letters mean the room number, and the last letter means the rack code.

For example;

If the index code is 3-1-A, the sentinel mouse tested is from the room "3-1" rack "A".

Class	Microorganisms
A	<i>C. piliforme</i> , Ectromelia virus, Hantaan virus, Lymphocytic choriomeningitis virus (LCMV), Mouse hepatitis virus (MHV), <i>M. pulmonis</i> , Sendai virus (HVJ)
B	<i>C. kutscheri</i> , <i>C. rodentium</i> , <i>F. rodentium</i> , <i>H. bilis</i> , <i>H. hepaticus</i> , <i>R. heylii</i> , <i>R. pneumotropicus</i> , <i>Salmonella spp.</i> , Dermatophytes, Ectoparasites, Intestinal protozoa, Pinworms
C	<i>P. aeruginosa</i> , <i>S. aureus</i> , <i>P. murina</i>
D	Lactate dehydrogenase elevating virus (LDHEV), Mouse adenovirus (MAV type 1 & 2), Mouse cytomegalovirus (MCMV), Mouse minute virus (MMV), Mouse parvovirus (MPV), Mouse norovirus (MNV), Mouse polyoma virus (Poly), Mouse rotavirus (EDIM), Pneumonia virus of mice (PVM), Reovirus type 3 (Reo3), Theiler's mouse encephalomyelitis virus (TMEV/GDVII)

HEALTH REPORT

1/1

Facility: RIKEN BRC Experimental Animal Division

Test date: May 7, 2024

Examination No: 24021

Class	Pathogen(s)	Method(s)	Sentinel Animal(s) : BALB/cA-nu/+ ♀												
			2-Q-C												
A	Mouse hepatitis virus	Serology	0/1												
	Sendai virus	Serology	0/1												
	<i>Clostridium piliforme</i>	Serology	0/1												
	Hantaan virus	Serology	0/1												
	Ectromelia virus	Serology	0/1												
	Lymphocytic choriomeningitis virus	Serology	0/1												
	<i>Mycoplasma pulmonis</i>	Serology Cultivation	0/1 0/1												
A/B	<i>Salmonella</i> spp.	Cultivation	0/1												
B	<i>Citrobacter rodentium</i>	Cultivation	0/1												
	<i>Corynebacterium kutscheri</i>	Cultivation	0/1												
	<i>Rodentibacter</i> spp. (<i>Pasteurella pneumotropica</i>)	Cultivation	0/1												
	Dermatophytes	Cultivation	0/1												
	<i>Filobacterium rodentium</i>	Serology	0/1												
	Ectoparasites	Microscopy	0/1												
	Intestinal protozoa	Microscopy	0/1												
	Pinworms	Microscopy	0/1												
	<i>Helicobacter bilis</i>	PCR	0/1												
	<i>Helicobacter hepaticus</i>	PCR	0/1												
C	<i>Staphylococcus aureus</i>	Cultivation	0/1												
	<i>Pseudomonas aeruginosa</i>	Cultivation	0/1												
	<i>Pneumocystis murina</i>	PCR	0/1												
Gross lesion			0/1
